

## Streamline Your EDI Transactions with EnvoyLink Your High-Speed Connection

Sage Software is committed to providing comprehensive, integrated solutions to our business partners. EnvoyLink\* enables you to send and receive all of your healthcare EDI transactions via a secure, high-speed, broadband connection.

This HIPAA-ready solution provides a single tool through which healthcare providers can process all EDI transactions with Secure Socket Layers (SSL) encryption. By utilizing one universal identifier and routing all EDI communications through a single connection, your practice can quickly and easily process a wide range of real-time and batch transactions.

### **Real-Time Transactions:**

- Electronic Eligibility Verification
- Credit Card Processing

### **Batch Transactions:**

- All-Payer Hospital and Medical Claims
- Automated Eligibility Verification
- Electronic Statement Remittance
- Electronic Remittance Advice (ERA)
- Pharmacy Prescription Services (PPI)
- Print and Mail transactions, including:
  - Patient Statements
  - Collection Letters
  - Patient Communications and Inserts

\* EnvoyLink assumes a broadband connection with outbound connectivity from the server on which your practice management system resides. EnvoyLink is not a replacement for a firewall or other added security measures. There may be limitations or exclusions based on your practice management system, even those supported by Sage Software.

Note: Technical infrastructure arrangements are the responsibility of the customer and must be completed prior to installation and implementation. These tasks include, but are not limited to the following: Cabling, Broadband connectivity, Citrix support, and VPN support.
